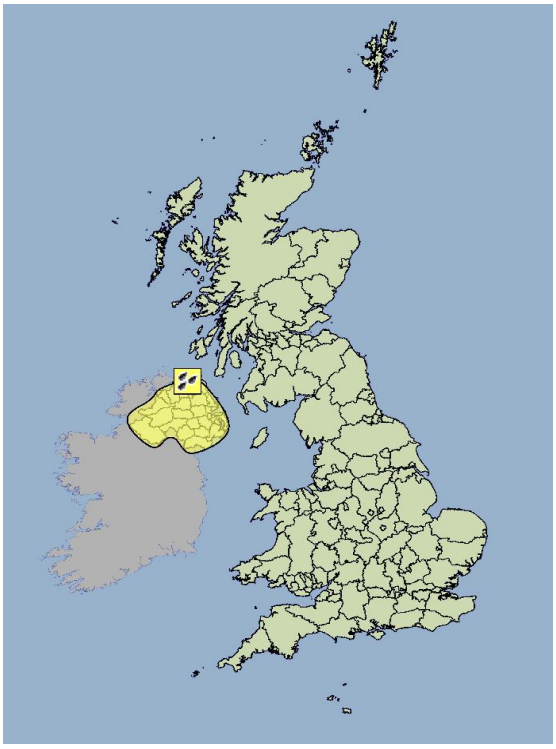
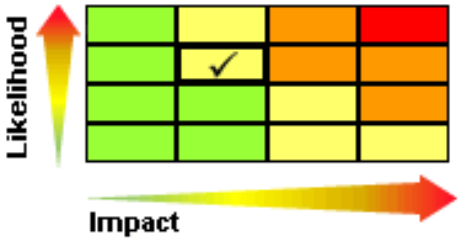
National Severe Weather Warning Service





Chief Forecasters Assessment
A very unstable airmass will affect Northern Ireland today. As temperatures rise, showers will become heavier and more widespread, and light winds will mean that showers are also slow-moving. 15 mm of rain, locally a little more, may fall in a short space of time, and this may lead to some surface water flooding. Lightning and hail may present additional hazards.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **12:10 on Fri, 24th Jun 2016** until **18:00 on Fri, 24th Jun 2016**

Heavy and possibly thundery showers will develop and become widespread during the afternoon. These showers are likely to be slow-moving, so could bring large amounts of rainfall in a short period of time. However, due to their scattered nature, there will be areas which avoid them. Showers will then gradually die away through the evening.

Please be aware of possible disruption to travel and localised surface flooding as well as lightning.

This is an update to extend the original yellow area further west across Northern Ireland.
